

HDHMR LOUVER PANELS

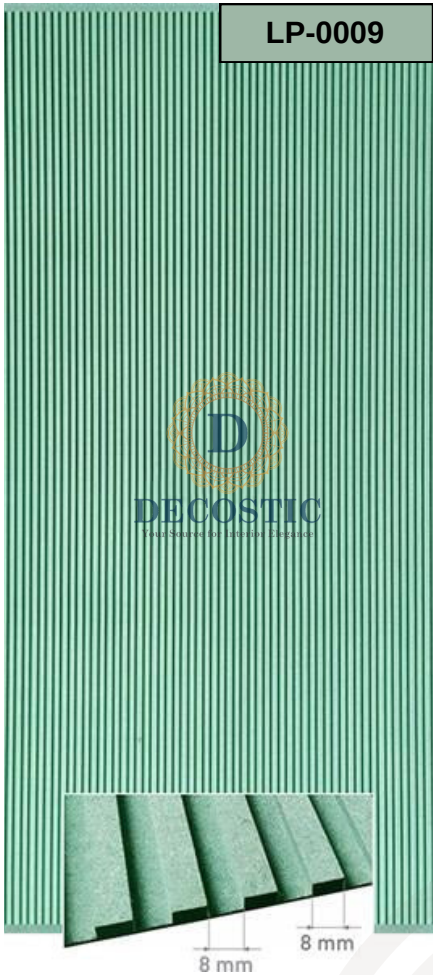

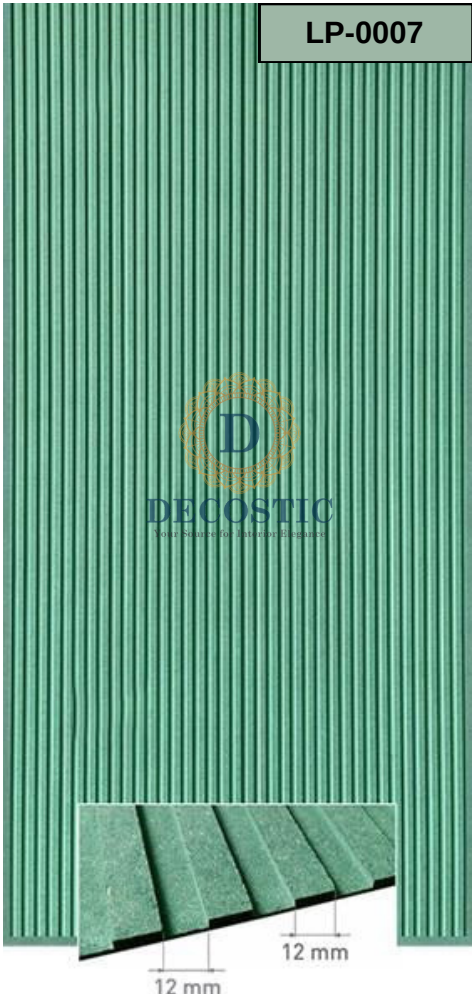

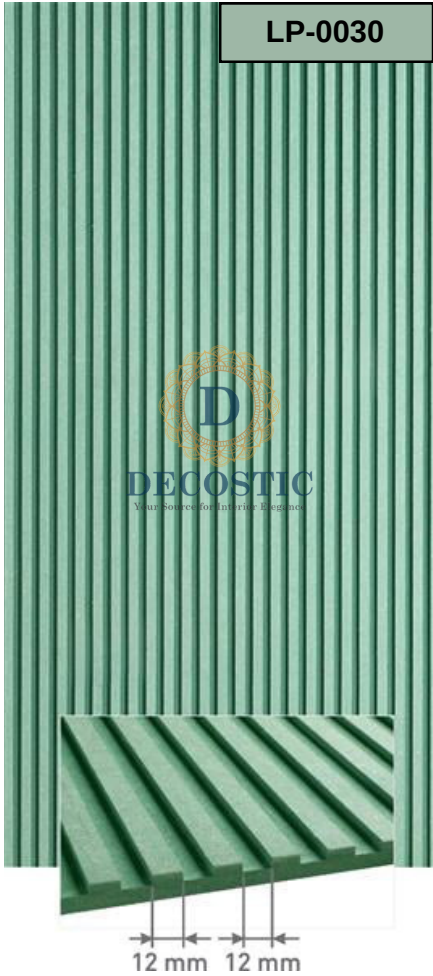

Louver Panels can be used to beautify all Interior walls and Ceilings in homes, offices, hotels, healthcare, education institutes, health clubs, recreation facilities, etc without the fear of breakage, discoloration or going bad.

HDHMR board has a multi dimensional bond with single layer glue architecture, hence it provide higher moisture resistance compared to normal plywood. Where normal plywood catches moisture and there layers start to peel off, HDHMR board will not losses its strength.

HDHMR board is developed using homogeneously method, which add benefits of carved, mould and routed during the construction process. Because of the multidimensional bond the HDHMR boards comes with higher screw strength, sometime close to 10 times more than usual block board and plywood. Also when talking about the cost effectiveness, HDHMR take over on other wooden boards.
